# Noise Abatement Procedures for Hilton Head Island Airport

## RECOMMENDED GOOD NEIGHBOR ARRIVAL AND DEPARTURE PROCEDURES

**DEPARTURES** - Consistent with safety, climb to 1,500 Feet, runway heading before making turns or as directed by the tower. Reduce takeoff power when safety permits.

### No intersections takeoffs!

**ARRIVALS** - Keep all arrival patterns over water as much as possible or as directed by the ATC.

Jets should be using NBAA standard noise abatement procedures when possible, consistent with safety.

## VFR TRAFFIC

### Runway 3 - Departures

Climb straight ahead to 1,200 feet and 1/4 mile off shore before making any turns unless instructed otherwise by the Tower. Climb at best rate consistent with safety. Turn on course when at least 1/4 mile off shore at or above 1,200 feet. Southbound departures, remain off shore following the Hilton Head Shore line.

### Runway 21 - Departures

Climb straight ahead to 1,200 feet and the start of Broad Creek before making any turns unless instructed otherwise by the Tower. At Broad Creek, Southbound departures make a left turn to the shoreline, then follow the Hilton Head shoreline Southbound just off shore. All others, turn on course Broad Creek at not less then 1,200 feet AGL.

### All Arrivals

As instructed by the Tower. Remain off-shore whenever possible and at pattern altitude as long as practicable. On final, maintain glide slope using the PAPIS.
